

Animals including humans

Vocabulary	Definition
adult	A fully grown animal.
diet	The food or water an animal needs to stay alive.
exercise	Keeping fit and healthy through physical activity.
habitat	Place where an animal lives.
hygiene	Keeping ourselves and the world around us clean so we can stop germs spreading.
life cycle	The changes in the life of an animal or human.
offspring	An animal's young or a human's children.
reproduction	When animals lay eggs or give birth to a baby.
young	Offspring that has not reached adulthood.
live young	Offspring that has not hatched from an egg.

Where do animals come from?

Animals reproduce and have offspring (young), which grow into adults.

Some animals, including humans, give birth to live young.

Some animals lay eggs which their young hatch from.

Some offspring look like their adult when they are born.

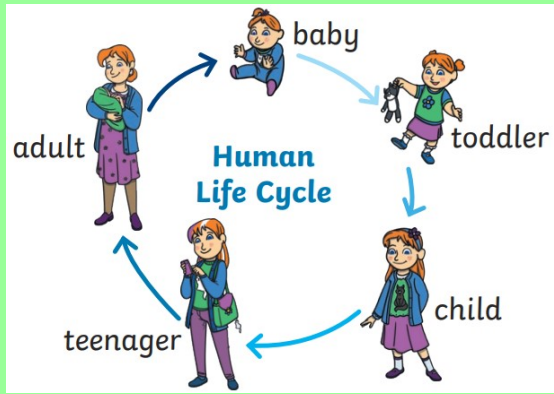

Some offspring do not look like their adult when they are born.

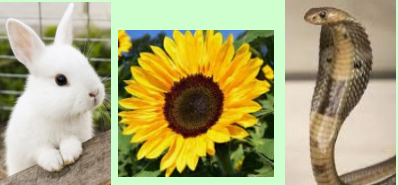

Life cycle

All young animals change as they go through their life cycle and change into adults.

What is the difference between living, dead and never alive?

Living things grow, move, feed, respond, reproduce, get rid of waste and need oxygen.

Dead things used to be alive but aren't anymore. They do not need food, air or water.

Never alive means things that were never living or part of a living thing.

What do animals need to survive?

All animals have three basic needs for survival

How do humans stay healthy?

Being active and **exercising** keeps our bodies and minds healthy.

To stop germs from spreading, it is important to be **hygienic**.

What do humans need to eat?

To grow into a healthy adult we must eat the right types of food in the right amount
